

Energy Services, a wholly owned subsidiary of E.ON UK plc, are working as agent for and on behalf of Central Networks to provide these details and to complete the installation of the PME terminal.

This form is used to ensure that your new Electrical Installation Works are being constructed and tested in accordance with relevant requirements and can therefore be connected to the distribution network without causing danger or interference with supplies to other customers. The form can be signed by the customer or by the person installing the wiring. You should always ensure that the works are carried out by a competent person.

Our contact details

Energy Services
Herald Way
Pegasus Business Park
Castle Donington
DE74 2TU

Tel: 01332 393 474

Address of premises where work is required

Important

Under the Electricity (Safety, Quality and Continuity) Regulations 2002 (and subsequent amendments) we need to be satisfied that the internal electrical installation has been installed in such a way as to prevent danger and not to cause interference to our system or the supply of other customers.

This obligation to safety can be met if your electrical contractor installs the wiring in compliance with the Requirements for Electrical installations BS 7671, 1992 (as amended from time to time), or equivalent.

This procedure requires your electrical contractor to provide you with an Electrical Installation Certificate for each property, and you must be able to produce these certificates on demand. We are required to audit the receipt of these certificates and if you are unable to demonstrate compliance, in order to meet our legal obligations and maintain the connection, we will arrange with you for the installation to be tested. All reasonable testing costs will be charged to you.
